

ELLABOINA HARISH

Python Developer | AI & Data Science Enthusiast

9110378223 | ellaboinaharish@gmail.com | [linkedin.com/in/ellaboinaharish](https://www.linkedin.com/in/ellaboinaharish) | Hyderabad, India

PROFESSIONAL SUMMARY

Detail-oriented Computer Science undergraduate and aspiring Python Developer with hands-on experience in Python, SQL, and data handling through academic projects and certifications. Skilled in applying machine learning fundamentals, writing clean and maintainable code, and working with frameworks such as NumPy and pandas. Quick learner with strong problem-solving ability, eager to contribute to production-quality Python applications and support data-driven engineering teams.

Key Strengths: *Fast Learner • Strong Ownership • Team Player • Clear Communicator • Detail-Oriented*

TECHNICAL SKILLS

Programming Languages: Python, C, JavaScript

Data & Databases: SQL, Data Handling, Data Visualization

Libraries & Frameworks: NumPy, pandas, scikit-learn, TensorFlow, Keras, Librosa, Flask, Django, React

AI / Machine Learning: Deep Learning, Neural Networks, Predictive Modeling, MFCC/Spectrograms, ML Fundamentals

APIs & Tools: Google Maps API, OpenStreetMap (OSM), Real-Time Data Integration, Git

PROFESSIONAL SKILLS

Communication • Problem Solving • Team Collaboration • Time Management • Adaptability • Ownership

EDUCATION

Bachelor of Technology (B.Tech), Computer Science

2022 – 2026

Siddharth Institute of Technology and Science, Narapally

Intermediate (MPC)

2020 – 2022

Sigma Junior College, Hanamkonda

PROJECTS

Accident Prediction and Smart Routing System

- Built a full-stack system combining a Python/ML backend (scikit-learn, TensorFlow) with a React front-end to predict accident-prone zones and recommend safer routes.
- Trained prediction models on historical accident data (location, time, weather) integrated with real-time traffic and GPS data for up-to-date risk assessment.
- Implemented smart routing logic using Google Maps/OSM APIs to combine accident-risk predictions with live traffic, suggesting routes that avoid high-risk zones.
- Handled the full data pipeline from collection and cleaning to model integration with the Flask/Django backend, applying production-oriented coding practices.

Deep Learning Techniques for Voice-Based Age Prediction

- Built a deep learning pipeline in Python using TensorFlow/Keras to predict speaker age from voice recordings.
- Preprocessed raw audio using Librosa, extracting MFCC and spectrogram features to convert speech signals into model-ready numerical data.
- Designed and trained a neural network architecture for the prediction task, handling data cleaning, feature engineering, and model evaluation end-to-end.

CERTIFICATIONS & ADDITIONAL INFORMATION

- Artificial Intelligence Fundamentals — IBM
- Artificial Intelligence & Data Science Workshop — DataMinds
- Network Security Certificate — Infosys Springboard
- Python Works — Jetking ECI
- NCC (National Cadet Corps) — A Certificate | Languages: Telugu (Native), English (Professional)
